

Extend PowerApps and Flow using Custom Connectors

Agenda

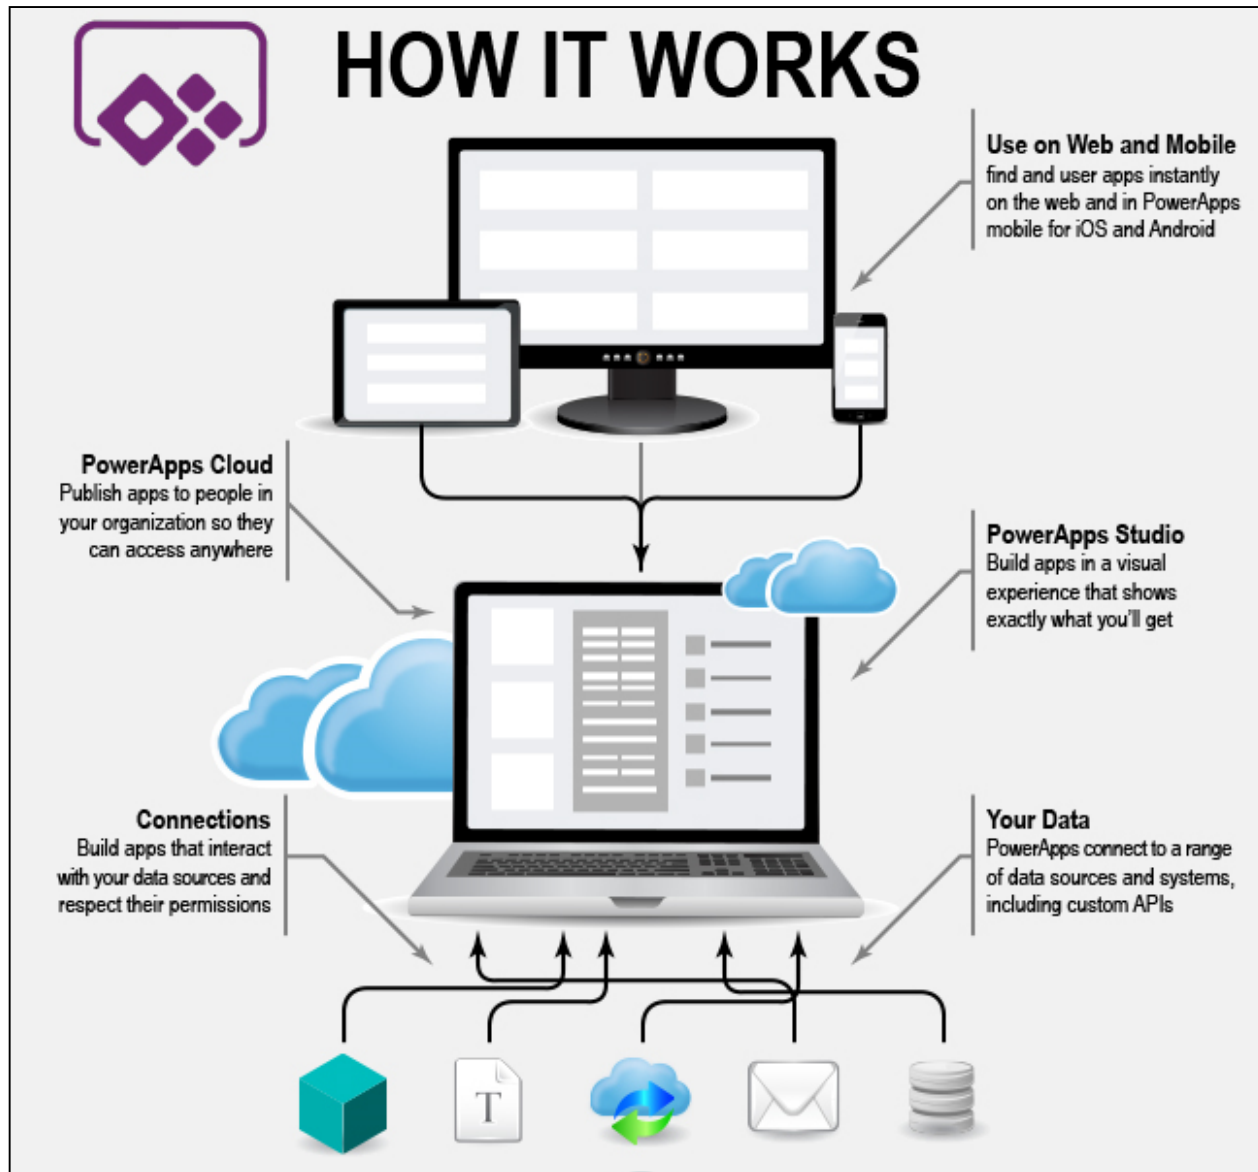

- Introduction to Custom Connectors
- Creating a Simple Custom Connector
- Authentication with Custom Connectors

What is the Business Application Platform?

What is PowerApps?

PowerApps Admin Center & Environments

- PowerApps architecture based on environments
 - Environment provides context for creating apps and flows
 - Every tenant is automatically created with default environment
 - Organization can create multiple environments for dev & staging
 - PowerApps Plan 2 license required to manage environments

The screenshot displays the Microsoft PowerApps Admin Center interface. The browser address bar shows the URL <https://admin.powerapps.com/environments>. The left sidebar contains navigation options: Environments (selected), Data policies, Data integration, and Tenant. The main content area is titled 'Environments' and includes a search bar and a '+ New environment' button. Below this is a table listing the environments for the tenant.

NAME ^	TYPE	REGION	CREATED
CPT Dev (org28ca923b)	Trial	United States	07/15/2018
CPT Production (org1c8c58b7)	Production	United States	07/15/2018
CPT Staging (org458f4b05)	Production	United States	07/15/2018
Critical Path Training Labs (default)	Default	United States	07/15/2018

Understanding Connectors & Connections

- What is a Connector?
 - API wrapper that PowerApps uses to interact with datasource
- What is a Connection?
 - Configuration created to connect to a specific datasource
 - Each connection is created using a specific connector
 - Connection also caches login credentials and granted permissions
 - Connections can be shared across users

The screenshot shows the 'SQL Server' connector configuration window. It has a title bar with the SQL Server icon and the text 'SQL Server Microsoft'. Below the title bar, there are four input fields: 'SQL server name *' with the value 'cpt.database.windows.net', 'SQL database name *' with the value 'WingtipSalesDB', 'Username *' with the value 'CptStudent', and 'Password *' with masked characters. At the bottom, there are two buttons: 'Cancel' and 'Create'.

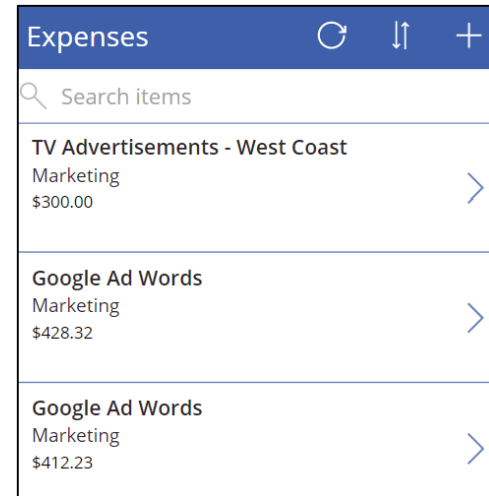

The screenshot shows the 'PowerApps' interface with the 'Connections' tab selected. The left sidebar shows the navigation menu with 'Connections' at the bottom. The main area displays a table of connections for 'Critical Path Training Labs (default)'. The table has columns for 'Name', 'Modified', and 'Status'. There are two connections listed: one for 'TedP@BizAppSummit.onmicrosoft.com OneDrive for Business' and another for 'WingtipSalesDB cpt.database.windows.net SQL Server'.

Name	Modified	Status
TedP@BizAppSummit.onmicrosoft.com OneDrive for Business	... 1 h ago	Connected
WingtipSalesDB cpt.database.windows.net SQL Server	... 7 sec ago	Connected

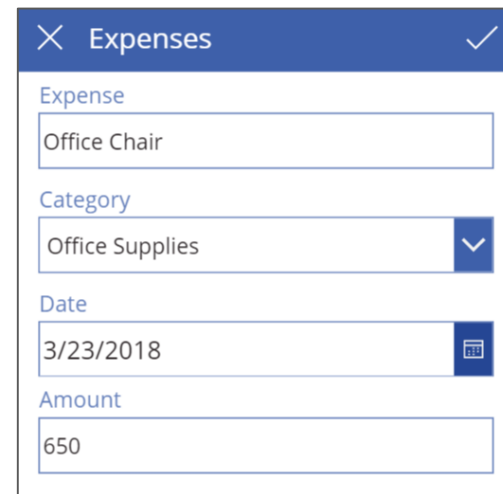

Data Binding with Galleries and Forms

- Table binding
 - Gallery control
 - DataTable control
- Single-record binding
 - Display form control
 - Edit form control

Expenses	
Search items	
TV Advertisements - West Coast	>
Marketing \$300.00	
Google Ad Words	>
Marketing \$428.32	
Google Ad Words	>
Marketing \$412.23	

Expenses	
Expense	
Office Chair	
Category	
Office Supplies	
Date	
3/23/2018	
Amount	
650	

Working with the Data Pane

- You use the Data pane to configure data binding
 - Select a data-bound control and then display Data pane
 - Data pane allows you to change layout for data binding
 - Once you select layout, you can then map fields below

The screenshot displays the PowerApps interface with the Data pane open. The interface is divided into three main sections: a left pane for controls, a central canvas, and a right pane for data configuration.

- Data-bound control:** An arrow points to the 'BrowseGallery1' control in the left pane.
- Data-bound connection:** An arrow points to the 'Expenses' data source in the 'Data source' section of the Data pane.
- Data-binding layout:** An arrow points to the 'Layout' section, which shows 'Title, subtitle, and body' as the selected layout.
- Field mappings:** An arrow points to the 'Body1' section, which shows the following field mappings:
 - Amount
 - Category
 - Expense

The central canvas shows a gallery titled 'Expenses' with a search bar and a list of items, including 'TV Advertisements - West Coast', 'Google Ad Words', 'Coffee Supplies', 'Printer Paper', 'Cleaning Supplies', and 'Toner Cartridges for Printer'.

Standard Connectors vs Custom Connectors

- PowerApps Supports two types of connectors
 - Standard connectors supplied out-of-box and vetted by Microsoft
 - Custom connectors created by organizations for their own use

Defining Requests

Request + Import from sample

* Verb

The verb describes the operations available on a single path.

GET

* URL

This is the request URL.

http://subliminalsystems.com/api/Customers/

Path

Path is used together with Path Templating, where the parameter value is actually part of the operation's URL.

Query

Query parameters are appended to the URL. For example, in /items?id=####, the query parameter is id.

Headers

These are custom headers that are part of the request.

Body

The body is the payload that's appended to the HTTP request. There can only be one body parameter.

Request + Import from sample

* Verb

The verb describes the operations available on a single path.

GET

* URL

This is the request URL.

http://subliminalsystems.com/api/Customers({CustomerId})

Path

Path is used together with Path Templating, where the parameter value is actually part of the operation's URL.

* CustomerId ...

Query

Query parameters are appended to the URL. For example, in /items?id=####, the query parameter is id.

Headers

These are custom headers that are part of the request.

Body

The body is the payload that's appended to the HTTP request. There can only be one body parameter.

Defining the Response

Connector Name

Customers Web Service

1. General > 2. Security > 3. Definition > 4. Test

✓ Update connector ✕ Close

▼ Actions (2)

Actions determine the operations that users can perform. Actions can be used to read, create, update or delete resources in the underlying connector.

1 GetCustomers ...

2 **GetCustomer** ...

+ New action

▼ References (0)

References are reusable parameters used by both actions and triggers.

← Back

Response

+ Import from sample

* Name

default

Headers

These are custom headers that are part of the response.

References Used

The following are the references used by this entity

Body

The payload that is available on the response. These are the tokens that will show up as the outputs in designer.

Address ... BirthDate ... City ... Company ... CustomerId ...

EmailAddress ... FirstName ... FirstPurchaseDate ... Gender ...

HomePhone ... LastName ... LastPurchaseDate ... State ... WorkPhone ...

Zipcode ... odata.metadata ...

Validation

This helps you identify potential issues with this response.

Validation

✓

Validation succeeded.

← Security Test →

Creating an Azure AD Application

The screenshot shows the Microsoft Azure portal interface. On the left is a dark sidebar with navigation options: 'Create a resource', 'All services', 'FAVORITES', 'Dashboard', 'All resources', 'Resource groups', 'App Services', and 'Azure Active Directory'. The main content area has a breadcrumb trail: 'Home > sharepoint confessions aad directory - App registrations > Create'. Below the breadcrumb is a 'Create' modal window. Inside the modal, there are three required fields, each with an information icon (i):

- 'Name' with the value 'Power BI Customer Connector' and a green checkmark.
- 'Application type' with a dropdown menu showing 'Web app / API'.
- 'Sign-on URL' with the value 'https://localhost' and a green checkmark.

At the bottom of the modal is a blue 'Create' button.

What About the Redirect URL?

The image shows two side-by-side screenshots of an OAuth 2.0 configuration interface. The left screenshot shows a form with a 'Redirect URL' field containing the text 'Save the custom connector to generate the redirect URL'. A red arrow points from this field to the right screenshot. The right screenshot shows the same form, but the 'Redirect URL' field now contains the URL 'https://msmanaged-na.consent.azure-apim.net/redirect'. Another red arrow points from the 'Save' button in the left screenshot to the 'Redirect URL' field in the right screenshot.

GetDatasets

Request

It defines the pre-requirements needed in order to make a request. Describes a single operation parameter. A unique parameter is defined by a combination of a name and location.

Request

+ Import from sample

* Verb

The verb describes the operations available on a single path.

GET

* URL

This is the request URL.

```
https://api.powerbi.com/v1.0/myorg/groups/{workspaceId}/datasets
```

RefreshDataset

Request

It defines the pre-requirements needed in order to make a request. Describes a single operation parameter. A unique parameter is defined by a combination of a name and location.

Request

+ Import from sample

* Verb

The verb describes the operations available on a single path.

POST

* URL

This is the request URL.

```
https://api.powerbi.com/v1.0/myorg/groups/{workspaceId}/datasets/{datasetId}/refreshes
```

Path

Path is used together with Path Templating, where the parameter value is actually part of the operation's URL.

* workspaceId ...

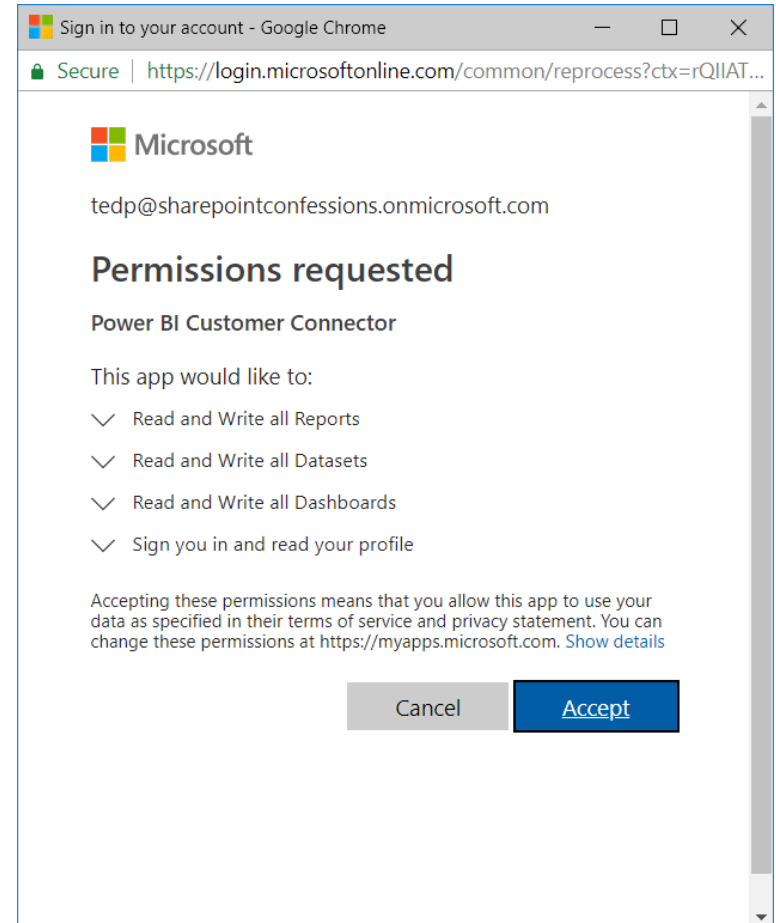

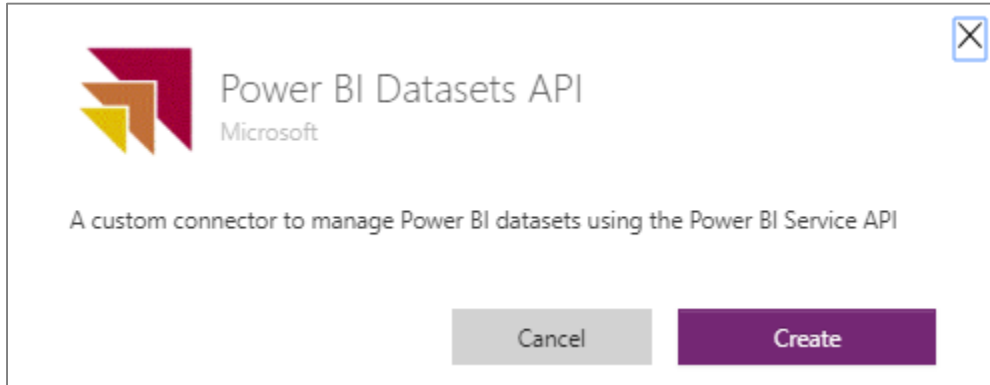

* datasetId ...

Query

Query parameters are appended to the URL. For example, in /items?id=####, the query parameter is id.
